

# SCOUT-SNIPER INTERMEDIATE TRAINING

Trident Crisis Management Group, Inc.

Few combat techniques are able to help shape the course of events on the battlefield as effectively as a successful scout-sniper team. Able to disrupt and delay troop movements, neutralize command and control leadership, and demoralize troop populations, a good scout-sniper team is an efficient and effective force-multiplier when compared to the size of its footprint. In law enforcement, scout-snipers are an invaluable resource that sometimes offers the only possible resolution to a specific problem. TridentCMG scout-sniper Instructors have received the most advanced training available in this discipline and have served in that capacity with the most effective special forces units in the US military. The TridentCMG Scout-Sniper Intermediate Course combines classroom lecture, demonstration and practical application of sniper weapons systems, to include Scout techniques and Stalking. It is focused on the mastery of fundamental skills and progresses to realistic operational drills that prepare students to make accurate shots from concealed positions (final firing positions) in support of law enforcement and military operations. Upon completion, students will have learned the tactics, techniques and procedures that promote mission success and survivability under stressful, simulated tactical situations.
